

Medical Practice

Protect your patients from nosocomial infections and reduce the risk of contamination within your medical practice with Sanity System.

The constant disinfection of medical instruments and the use of sterile material for each new patient is not always practical or sufficient to effectively protect against infection and disease. Even with regular cleaning and sanitizing, not all areas or instruments that can contain harmful bacteria and virus can be cleaned via an autoclave.

One of the easiest, most convenient and efficient ways to reduce the spread of infection and disease is to sanitize your practice using Ozone. Ozone is a natural gas with a very high oxidant power which leaves no tract or chemical residuals when used. Ozone is inflammable, abrasive or explosive and doesn't damage fabric, furniture, décor, equipment or machinery; it also causes no harm to people or animals.

The implementation of Sanity System not only protects your patient's health by reducing the risk of spreading disease and infection, it also signifies your practice's commitment to the safety and welfare of your patients and staff.

Applications

Sanitizing with ozone is recommended for all types of health environments such as;

- ✓ Medical centres
- ✓ Clinics
- ✓ Outpatients clinics
- ✓ Medical practices
- ✓ Dental practices
- ✓ Specialist practices

Sanitizing with Ozone

- Removes bacteria, mites, moulds, fungus, spores, yeasts and pollens
- Inactivates viruses
- Removes the smell of urine, faeces, mould, cooking and decomposition
- Destroys the volatile residue of chemical detergents
- Repels little rodents and infesting insects such as flies, mosquitos, cockroaches and more

Benefits

- Increases compliance with workplace health and safety regulations
- Protects form the risk of contamination and the spread of infection and disease
- Protects your clients' and medical staff's health
- Improves microbiological safety of your medical practice
- Increases your patients' comfort
